TORTLE NICU MIDLINER

Precision Head Positioning System for micro-preemies & preemies.

Midliner Benefits:

**Supports Supine Midline Position/
Neutral head positioning**

- The AAP recommends supine midline position for micro-preemies during the first 72+ hours of life to help prevent intra-ventricular hemorrhage (IVH)

**Velcro front opening provides flexible
size adjustment**

- Simple and easy to apply which minimizes handling and stress on baby
- Provides easy access for scalp IVs and head ultrasounds
- Ensures a proper and comfortable fit without slippage
- Reduces intervention time for patients & staff

New design + materials

- Securely holds all nasal CPAP interfaces and nasal cannulas including RAM, as well as feeding tubes
- Includes additional straps to hold most bilishades
- X-ray friendly and compatible with ventilator

**Simplifies transition to all positions, including
supine midline, side lying and prone (log rolling)**

- No need to detach and re-apply respiratory or feeding apparatus
- Helps prevent and treat Dolichocephaly/Scaphocephaly & Head preference

Available in three sizes

SIZE	CASE#	HEAD CIRCUMFERENCE
ELBW	65911	17-22 cm
MICRO	65901	22-30 cm
PREEMIE	65903	30-36 cm
